

# CREATIVE FERTILISERS

Superior Fertilisers has been leading the development and manufacturing of mineral rock granules with microbial enhancement for over 20 years.

Our Granular products contain a unique Organic base carefully manufactured from a selected range of Natural Rock Minerals including Soft Rock Phosphate that supply a full spectrum of all NPK, trace and macro elements this is then biologically inoculated with up to 26 species of microbes including Mycorrhizal fungi and phosphorus solubilizers (*such as Bacillus megaterium*). All of these elements include a biological food source and combine to provide the generation of larger more effective root systems which help the plant access our applied mineral rock nutrition, soil moisture and locked up soil nutrients.

*No harmful chloride fertilisers, like muriate of potash are used in the production of any of our products or special blends allowing microbial activity to thrive with the application of these fertilisers.*

*Our premium fertiliser products SF 14 and SF35 are for all horticultural, plantations and broad acre crops. Special custom blends are developed where required, for particular crops such as macadamia's, sugar cane, avocados and cotton etc.*

Frequently the discussion across the fence between growers of Horticultural, Field, Broadacre crops, Pasture, Dairy, Sugar Cane and Cotton is.... Why are Superior Fertiliser blends out performing equivalent conventional N P K fertilisers and other fertiliser types?

The answer can be found by understanding what else is in our fertiliser that offers essential plant nutrients for growth, plant health and ultimately our own health.

Gentle yet strong, our products ensure continuous nutrition especially for crops that place high demand on fertiliser nutrient availability by containing significant quantities of Calcium, Sulphur, Silicon, Carbon, Zinc, Manganese, Copper, Boron, Molybdenum, Cobalt as well as beneficial microbes and biology.

These nutrients can be added individually. However, it is our unique combination of nutrients in our blends that give our products their hybrid vigour.

Superior Fertiliser products, range from organically registered (ACO) granules and liquids through to high analysis NPK / rock mineral blends and liquids.

Granular range products are available in 25kg bags, 1T bulk bags and bulk.

Liquid range products are available in 5L, 20L, 200L and 1000L.

Custom blends for specific crop nutrient requirements are our specialty. We allow direct input from paddock specific soil tests and current agronomic advice to be included in the custom blend formation.

A single custom blend application can meet all crop nutrient requirements which saves time and reduces in field costs.

We are currently developing new products to add to our fertiliser range, always with a view to long term soil improvement and sustainability so as to achieve high food value produce.

Our aim to supply High Quality Fertilisers and Excellent customer service at a cost effective price.
