

**Liquid Fertilisers for Immediate Results
For Vegetative Development**

Express Nitrogen

Total Nitrogen (N) 26%
Stabalised

Liquid fertiliser designed for:

- ✓ Drip, Tee & Overhead Irrigation
- ✓ Fast Foliar Nutrient Uptake
- ✓ Longer lasting in light soils

Strong, non-leaching Nitrogen...

- ★ NITROGEN (N) for direct crop nutrition
- ★ Stabalised to reduce nutrient loss

Express N is stabilised using a proprietary process designed to release nitrogen on demand, and limited leaching / volatilisation.

Nitrogen can be strong and quick to act, without waste. **Express Nitrogen** gives a gentle control over Nitrogen release whilst improving its plant availability.

This gives a nitrogen response that:

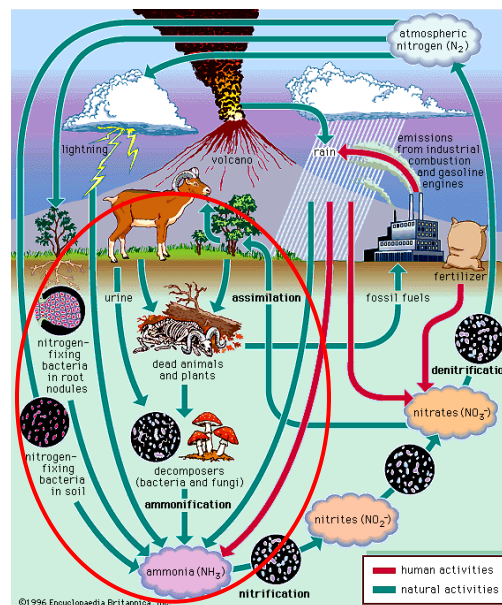

- Lasts longer
- Yields better Nitrogen uptake
- Environmentally friendly
- and Cost affective

Stabalised Express N reduces the risk of over applying Nitrogen

Wasteful Nitrogen applications not only increase the risk of ground water pollution, but also reduced microbial activity and nutrient storage due to impeded nitrogen cycling. *This can affect soil structure, Cation Exchange Capacity (nutrient exchange), and overall fertility of the soil.* Express N is designed to reduce this risk, and in some cases encourage better nutrient cycling.

General Application: 5-8Lt/Ha
See label for specific rates and handling instructions.
Not compatible with acidic products, jar test first to check compatibility

Circled area above demonstrates some of the microbial & soil forming processes associated with the normal N Cycle
